## 5.3 COLOR DATA INPUT ASSIGNMENT

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color. The higher the binary input, the brighter the color. The table below provides the assignment of color versus data input.

#### 6.2 POWER ON/OFF SEQUENCE

## Timing Specifications:

 $0.5 \leq t1 \leq 10 \text{ ms}$ 

 $0 \le t2 \le 50 \text{ ms}$ 

 $0 \le t3 \le 50 \text{ ms}$ 

 $t4 \ge 500 \text{ ms}$ 

 $t5 \ge 200 \text{ ms}$ 

 $t6 \ge 200 \text{ ms}$ 

- Note (1) Please follow the power on/off sequence described above. Otherwise, the LCD module might be damaged.
- Note (2) Please avoid floating state of interface signal at invalid period. When the interface signal is invalid, be sure to pull down the power supply of LCD Vcc to 0 V.
- Note (3) The Backlight inverter power must be turned on after the power supply for the logic and the interface signal is valid. The Backlight inverter power must be turned off before the power supply for the logic and the interface signal is invalid.
- Note (4) Sometimes some slight noise shows when LCD is turned off (even backlight is already off). To avoid this phenomenon, we suggest that the Vcc falling time is better to follow 5ms≤t7≤300 ms.

- Note (0) Light source is the standard light source "C" which is defined by CIE and driving voltages are based on suitable gamma voltages. The calculating method is as following:
  - 1. Measure Module's and BLU's spectrums. White is without signal input and R, G, B are with signal input. BLU is supplied by CMO.
  - 2. Calculate cell's spectrum.
  - 3. Calculate cell's chromaticity by using the spectrum of standard light source "C"

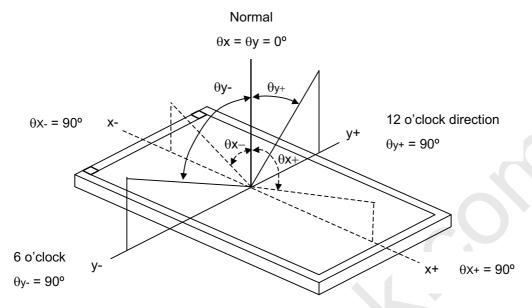

Note (1) Light source is the BLU which is supplied by CMO and driving voltages are based on suitable gamma voltages. White is without signal input and R, G, B are with signal input. SPEC is judged by CMO's golden sample.

Note (3) Definition of Contrast Ratio (CR):

$$CR_{AVE}$$
= [CR(1)+ CR(2)+ CR(3)+ CR(4)+ CR(5)] / 5

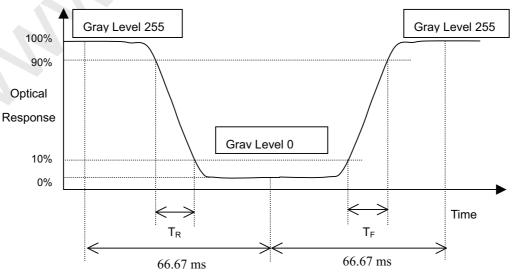

CR<sub>max</sub>=Max value of CR at whole Viewing Angle

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (6).

Gmax: Luminance of gray max at the center point of panel.

Gmin: Luminance of gray min at the center point of panel.

Global LCD Panel Exchange Center

Note (5) Definition of Luminance of White (L<sub>C</sub>):

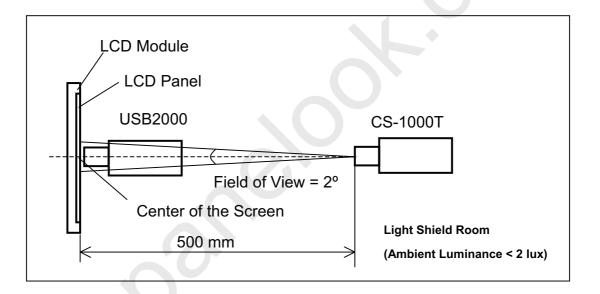

Measure the luminance of gray level 255 at center point

$$L_C = L(5)$$

L (x) is corresponding to the luminance of the point X at Figure in Note (7).

## Note (6) Measurement Setup:

The LCD module should be stabilized at given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 20 minutes in a windless room.

Note (7) Definition of Transmittance Variation ( $\delta T\%$ ): Measure the transmittance at 5 points

Note (8) Definition of Transmittance (T%):

Module is without signal input.

BLU is supplied by CMO.

#### (2) Adjustment Method:

Flicker should be adjusted by turning the volume for flicker adjustment by the ceramic driver. It is adjusted to the point with least flickering of the whole screen. After making it surely overrun at once, it should be adjusted to the optimum point.

#### 10. PRECAUTIONS

#### 10.1 ASSEMBLY AND HANDLING PRECAUTIONS

- (1) Do not apply rough force such as bending or twisting to the product during assembly.
- (2) To assemble backlight or install module into user's system can be only in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.
- (3) It's not permitted to have pressure or impulse on the module because the LCD panel will be damaged.
- (4) Always follow the correct power sequence when the product is connecting and operating. This can prevent damage to the CMOS LSI chips during latch-up.
- (5) Do not pull the I/F connector in or out while the module is operating.
- (6) Use a soft dry cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.
- (7) It is dangerous that moisture come into or contacted the product, because moisture may damage the product when it is operating.
- (8) High temperature or humidity may reduce the performance of module. Please store this product within the specified storage conditions.
- (9) When ambient temperature is lower than 10°C may reduce the display quality. For example, the response time will become slowly.

#### 10.2 SAFETY PRECAUTIONS

- (1) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- (2) After the product's end of life, it is not harmful in case of normal operation and storage.
